

**Names:** Harsohail Brar (30041921)

Gary Wu (30038110)

Ryan Holt (30038609)

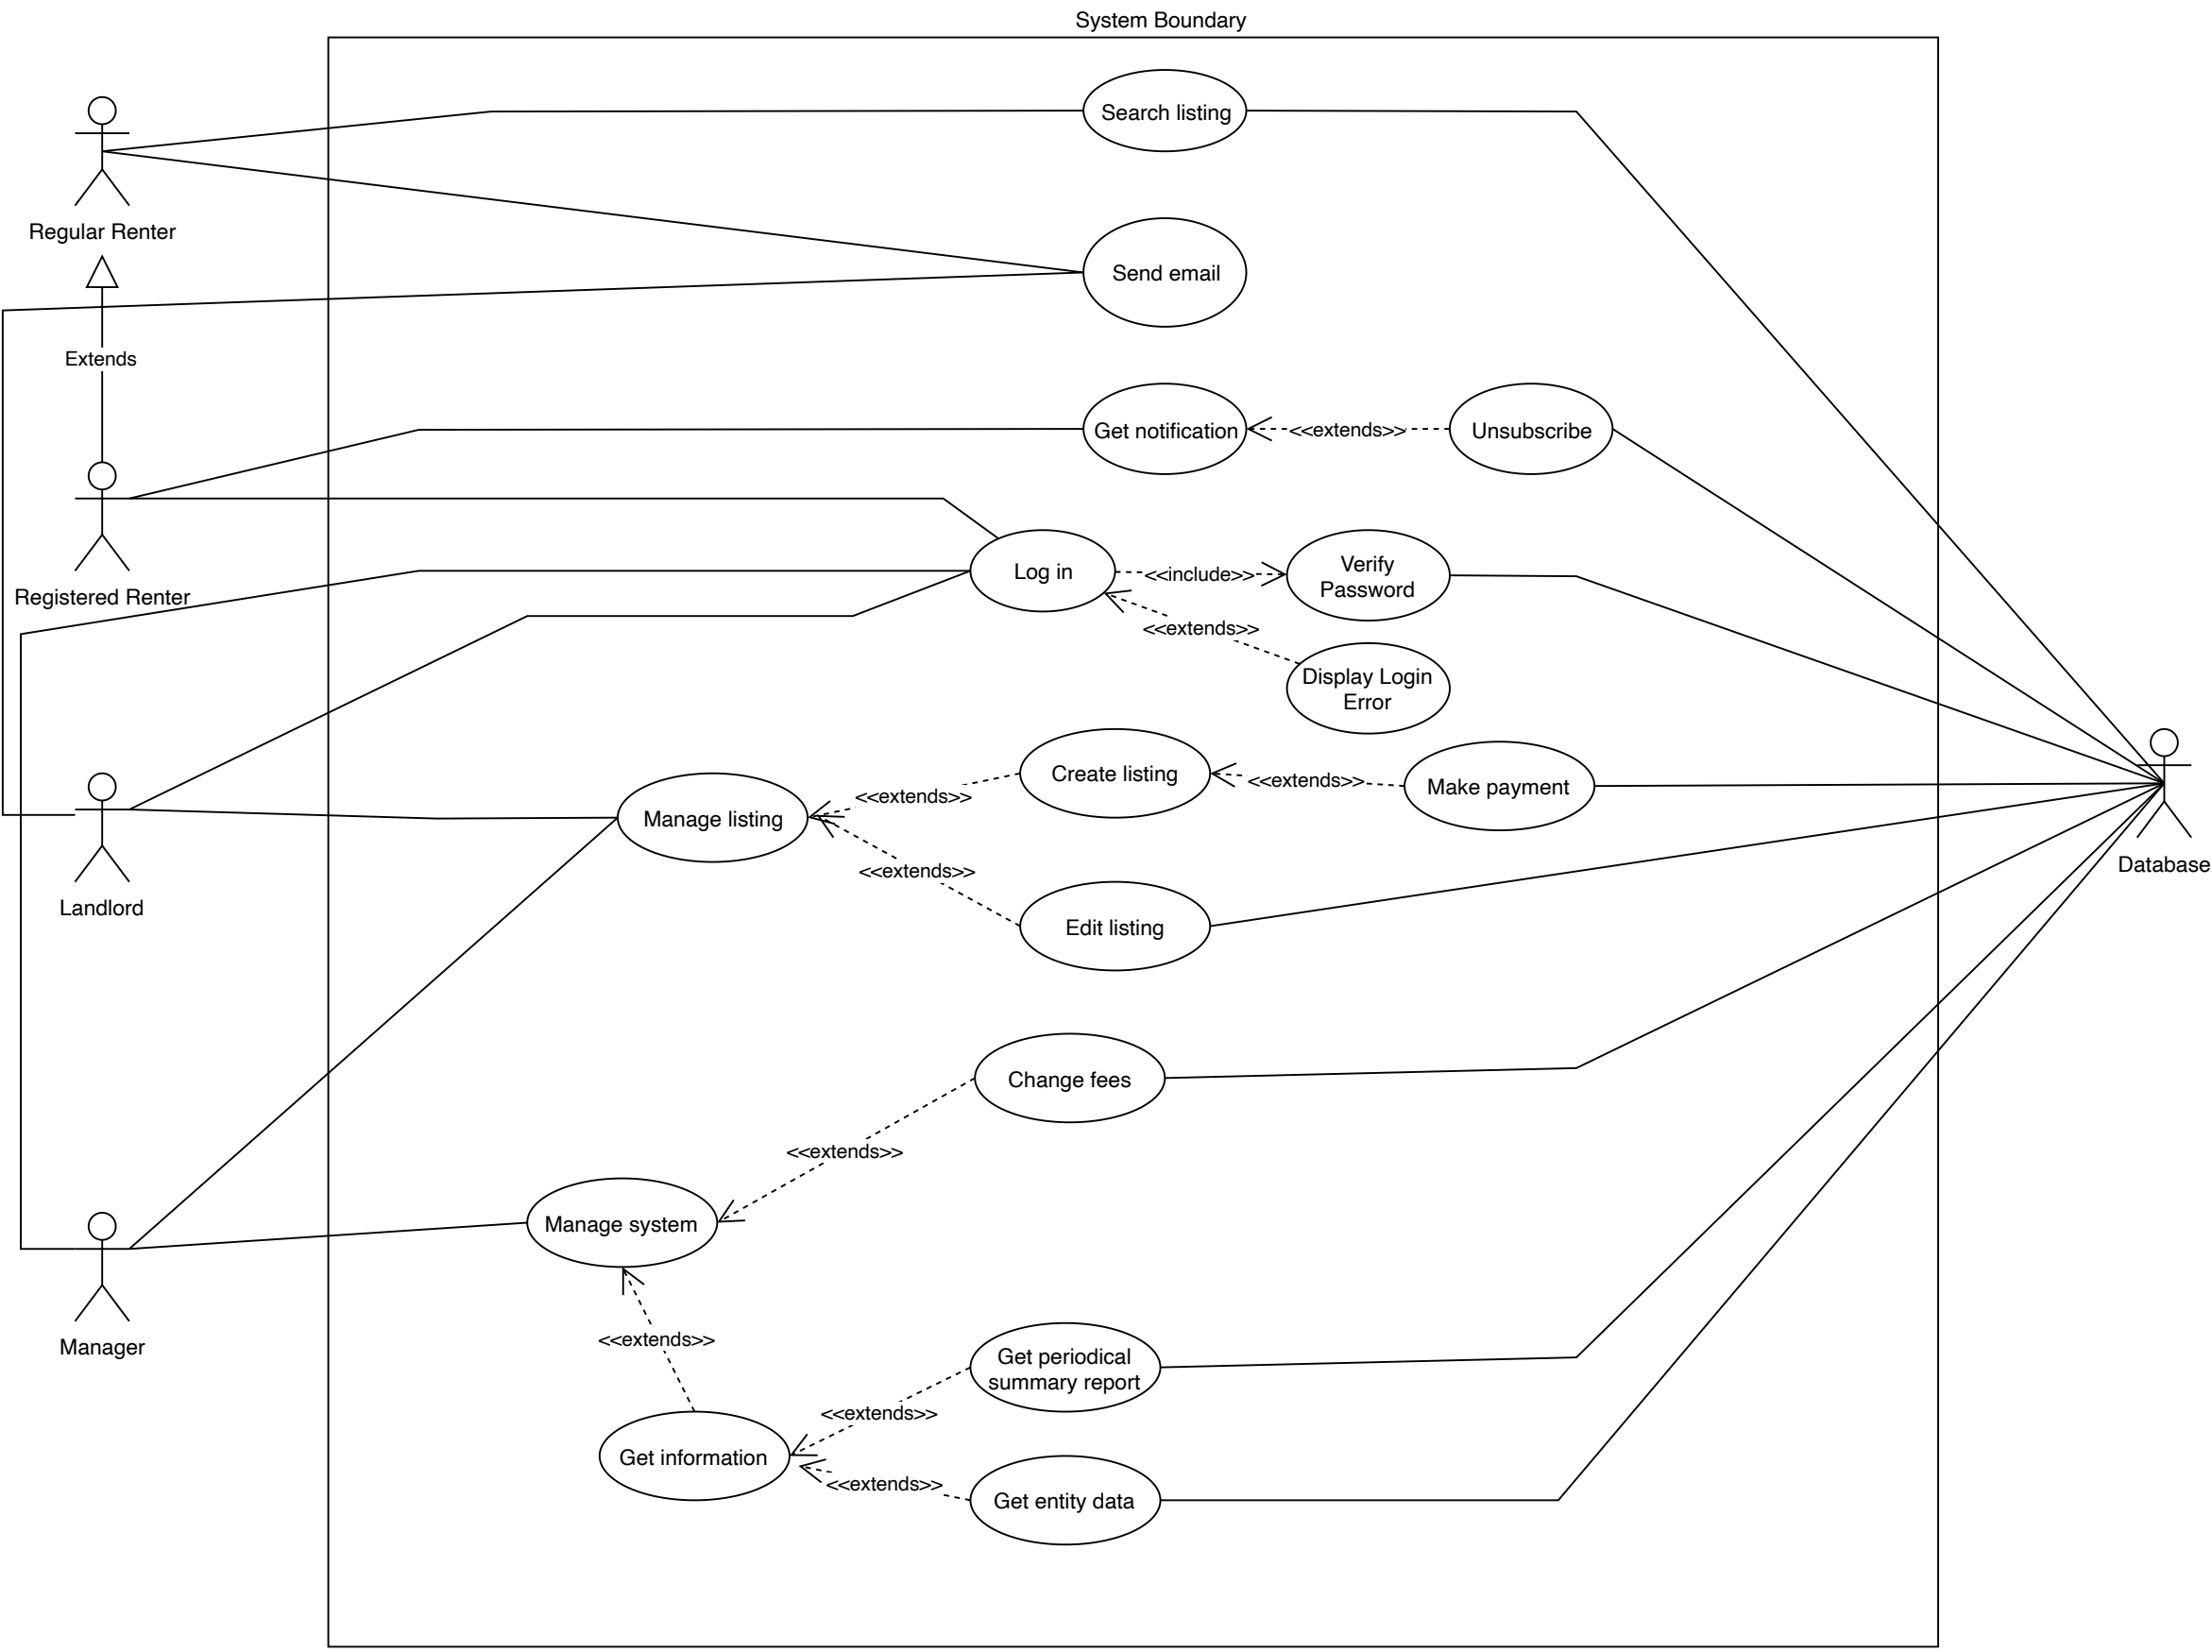

**Course Name:** Principles of Software Design

**Course Code:** ENSF 480

**Assignment Number:** Term Project Design Document

**Submission Date and Time:** 09/11/2019

# System's Use Case Diagram

System's Activity Diagram

## State Transition Diagrams Property Object

## States

**Not Active:** listing is created in database but not yet available for renters to view.

**Active:** listing is available for renters to view

**Rented:** listing is not available for renters to view as it is rented but it is stored in the database with the changed status

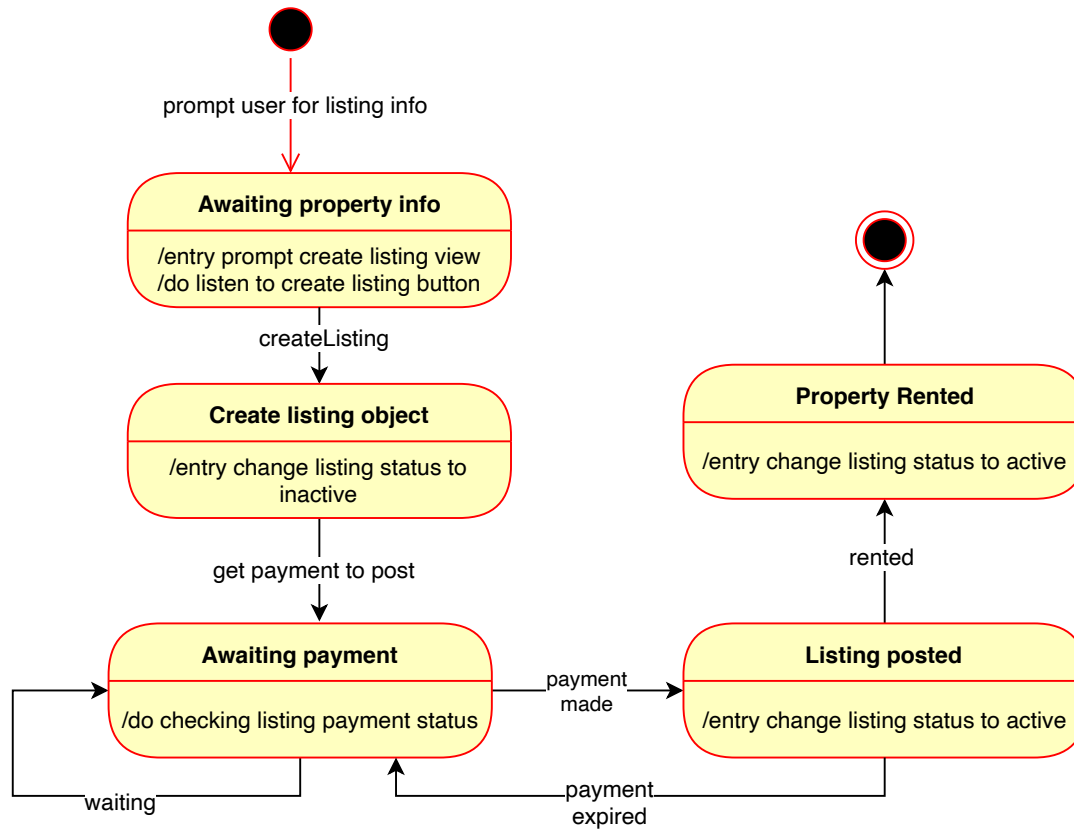

**Cancelled:** listing is deleted from the system

**Suspended:** landlord suspends the listing temporarily to hide it from renters viewing it. (ex. if landlord is the middle of signing a contract with a potential renter)

## Note

The external stimuli of a manager can change a property object from any state to any state which is not shown in the diagram to keep simplicity and clarity

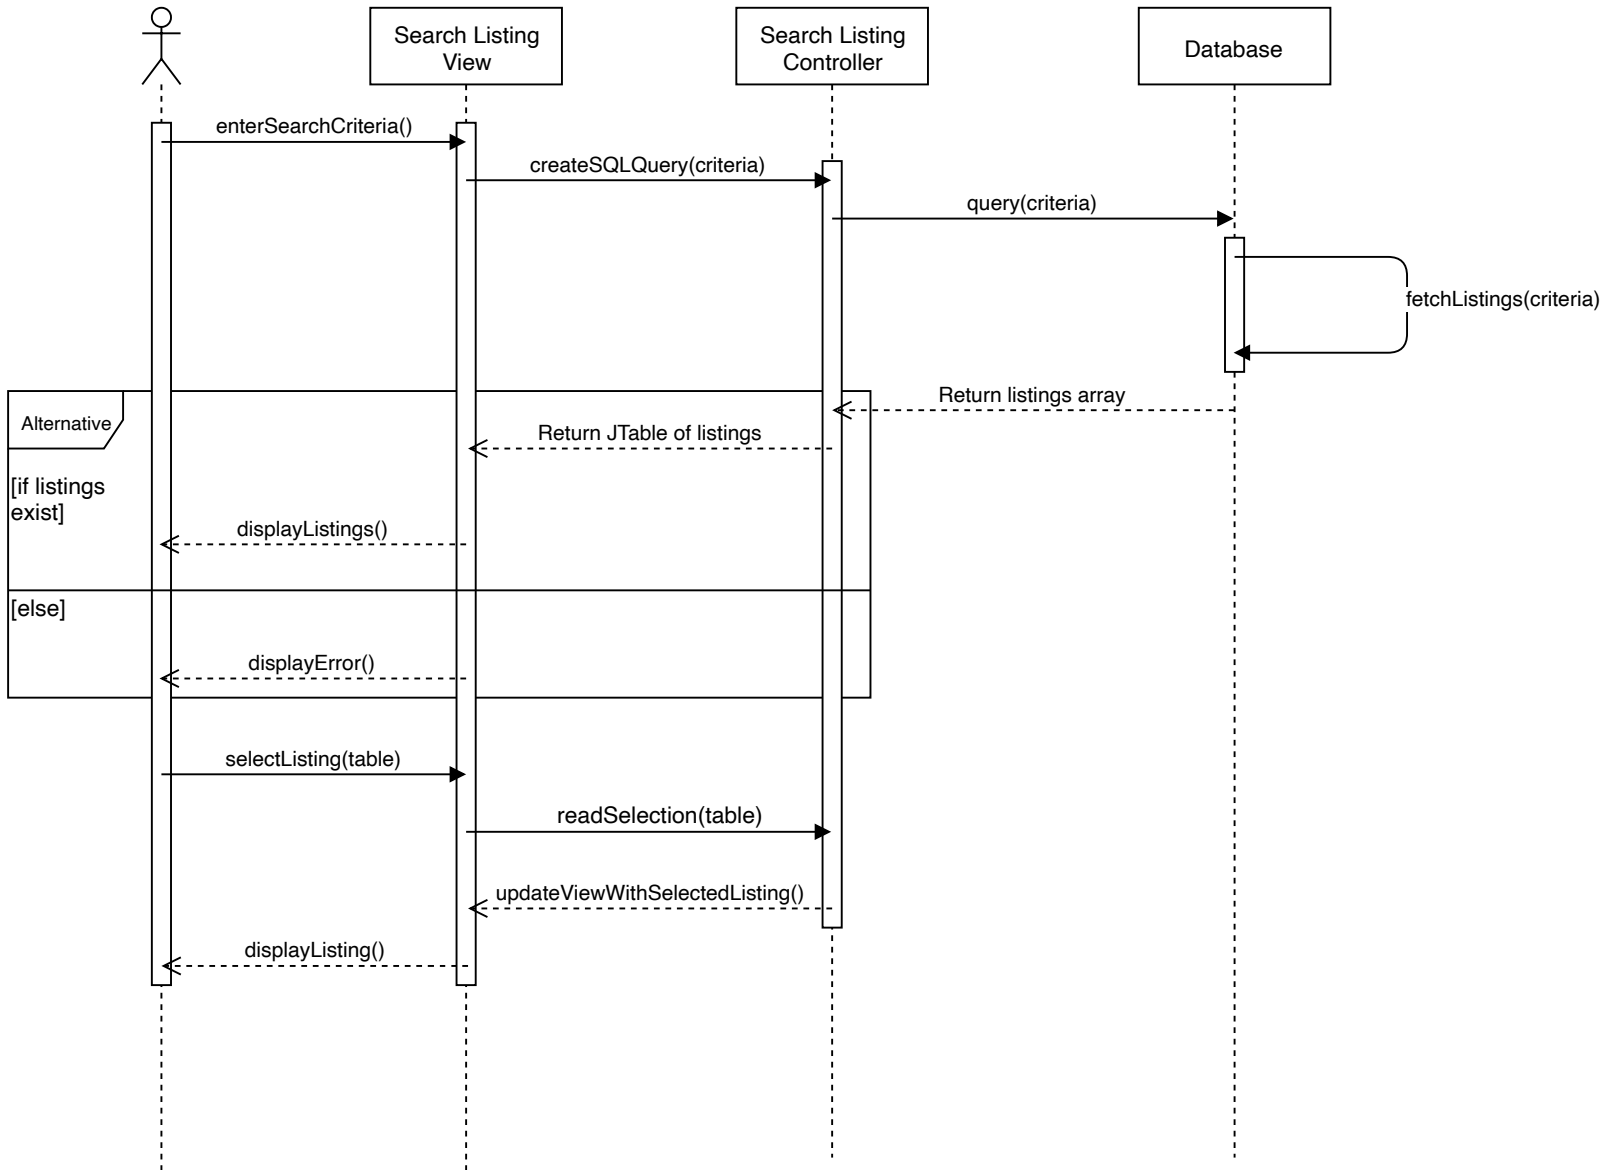

## Process that landlord posts his/her property

# Use Case: User Login

# Use Case: Search Listing

Renter

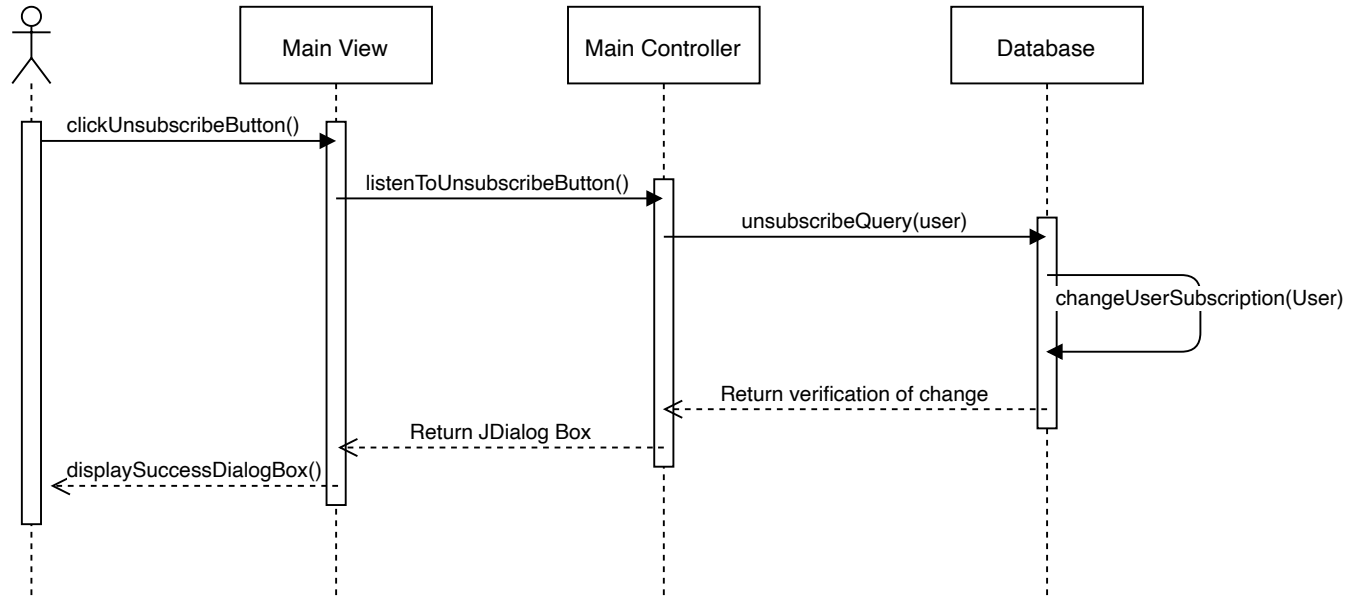

### Use Case: Send Email

Registered  
Renter

### Use Case: Unsubscribe

Landlord

### Use Case: Create Listing

# Use Case: Make Payment

Landlord

Manager

### Use Case: Change fees

Manager

### Use Case: Get periodical report

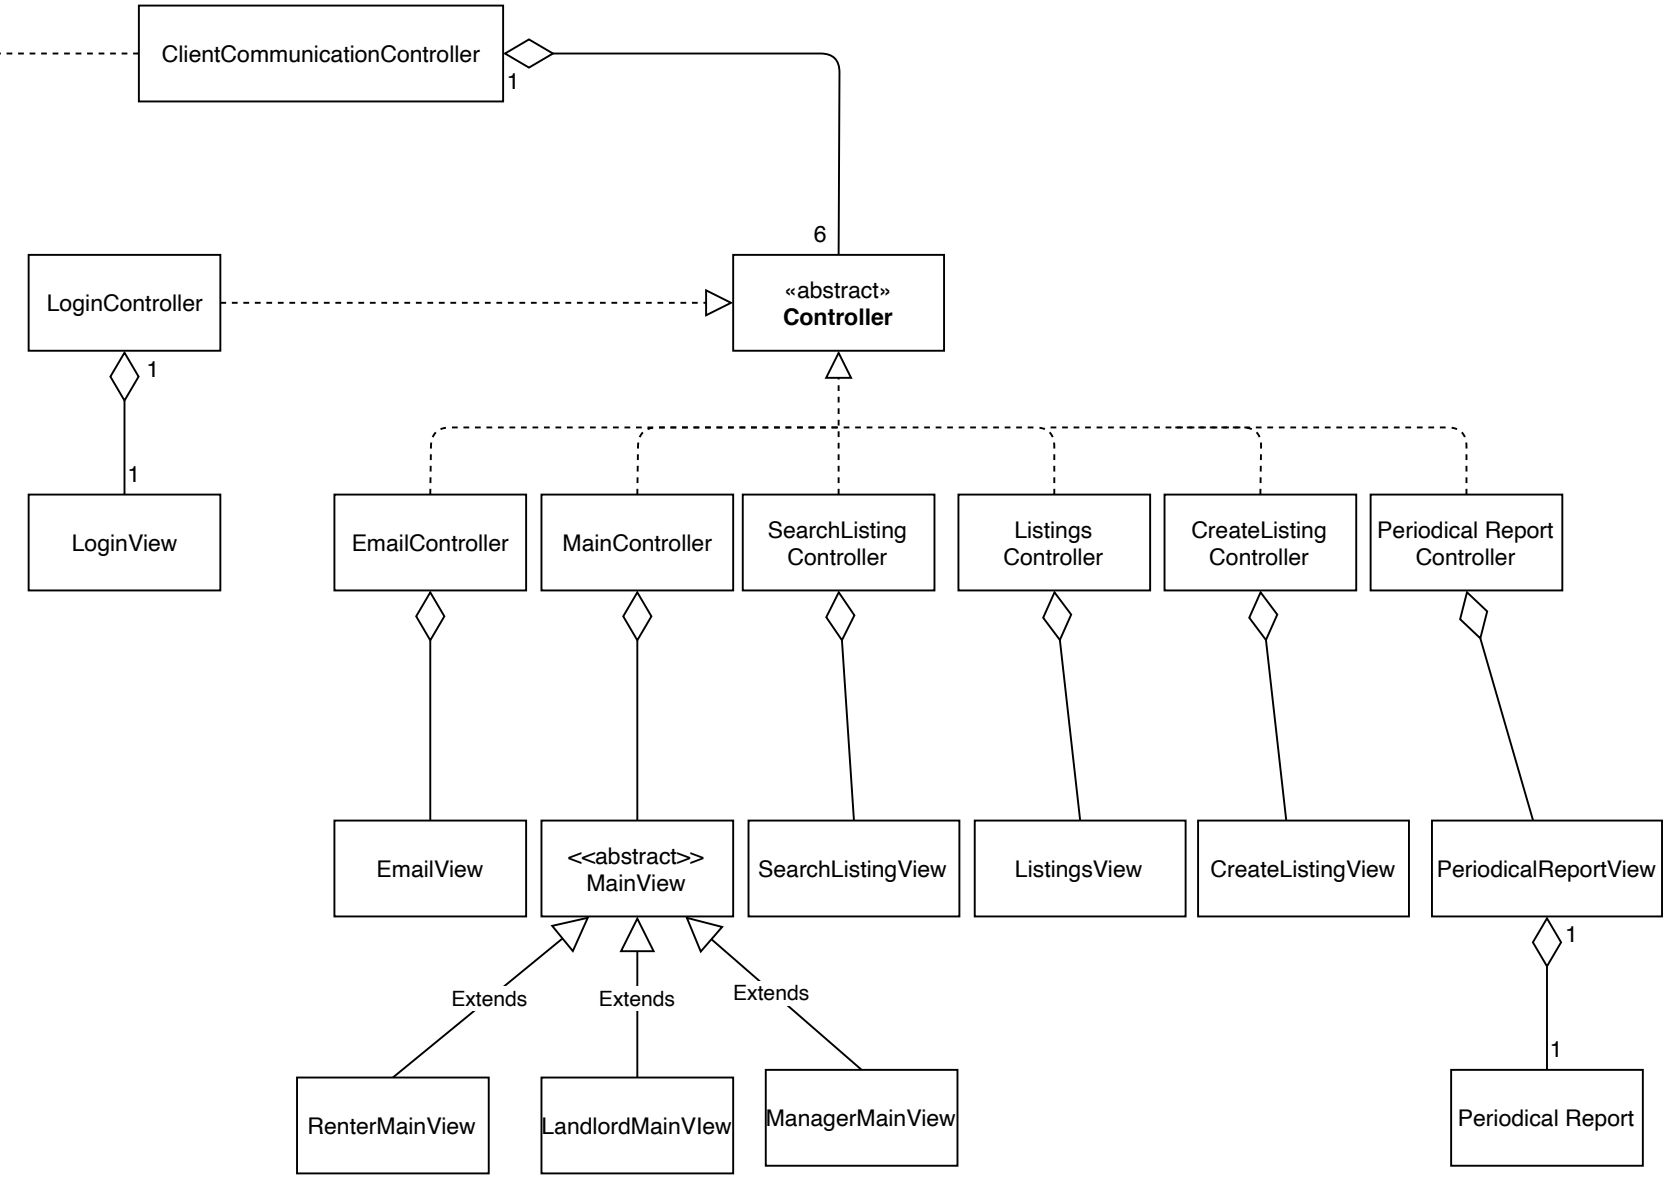

Manager

Use Case: Get entity info (entity can be renter, landlord, or property)
